TAPE WITH PP SUPPORT

Very good value for money. PP is a flexible and tough material. According to the microns of film and type of adhesive, it can be a product that is excellent value for money or a very strong product. We only need to increase the thickness and add a strong adhesive.

TAPE WITH ACRYLIC ADHESIVE

The acrylic adhesive is water-based. More ecological. Available with or without noise. Acrylic tape with noise is the standard product, offering good adhesion and excellent value for money. Acrylic noiseless adhesive has excellent quality and is recommended for all types of use.

TAPE WITH PVC SUPPORT

A PVC film gives great consistency to the tape. The PVC material gives the tape a great deal of rigidity and makes it very tough, offering 35 microns for a Premium product. As well as being a noiseless tape.

TAPE WITH SOLVENT ADHESIVE

Doubtlessly the highest quality adhesive made from natural rubber and tree resin. Providing great adhesive power on any surface. Recommended for heavy boxes.

PAPER AND CARDBOARD

For these porous materials, the ideal adhesives are white glue, glue sticks and water glue. Solvent-free adhesives, also ideal for school use.

EVA FOAM AND PLASTIC

To efficiently stick plastics and derived products, the ideal glue is silicone or universal glue, as they are tougher. If you need quick drying, you can also try the super adhesive or a hot glue gun.

WOOD, LEATHER AND FELT

For wood, you can use the special wood glue, white glue or universal glue (for models) or contact adhesive for strong attachment. For leather or metal, we recommend contact or silicone adhesive. For felt, the best product to use is textile or universal adhesive.

APLIADVICE

Photo paper

Paper is made of a set of cellulose fibres laid out in a given way. If paper was not so arranged, the ink would set randomly on the paper and printing would be in low definition.

Frequently asked

- 1. Which factors should be considered when choosing a photographic inkjet paper?**

First, you should know what it is going to be used for, as APLI’s catalogue includes over 30 products, each one suitable for a specific use.

The paper has different finishes, depending on what it is to be used for: matt, glossy, satin and photographic. They also come in different sizes.
- inch), which is a characteristic of the image (camera, images off the Internet, scanned photos and so on) is not the same as the print resolution, a characteristic of the printer, which can be modified in its settings. The higher the image and print resolution are, the better the quality of the printed photo.

The grammage

The grammage is the weight per square meter of material, in this pack paper. In general, a higher grammage means greater stability and rigidity.

APLI papers are from 90 to 300 grams per square meter.
- 2. Can APLI paper be used with any type of printer?**

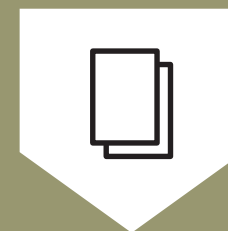

APLI paper is fully compatible with all the printers on the market and provide maximum quality in all packs.

3. Can inkjet paper be used in a laser printer?

No, laser technology is based on the heat given off by the printer rollers. Using inkjet paper in a laser printer could cause serious, permanent damage to the printer and the paper.
